

# COVID-19 Self-isolation Guidelines After Travel

# COVID-19 SELF-ISOLATION GUIDELINES

## For those at risk of developing COVID-19

Always follow the advice given to you by your health care provider and the local public health team. If you have questions, or begin to feel worse, contact your health care provider, dial 8-1-1 to speak to a nurse (available 24/7), or contact your local public health unit. For the most up to date information about COVID-19 in BC, please visit [www.bccdc.ca/covid19](http://www.bccdc.ca/covid19).

**If you have travelled outside of Canada, you will be asked to self-isolate upon your return.**

### Self-isolation means:

Staying at home (or other similar place) where you can avoid contact with people. Self-isolation can last up to 14 days, as this is how long it can take for someone to develop symptoms after close contact with someone with COVID-19.

**Note:** *There may be some extenuating circumstances under which essential workers may not be required to isolate for the full 14-day period. Please refer to your employer or government guidelines*

## The Deal: For 14 Days

### DO NOT leave home

While you cannot go into work, it may be possible to work from home as long as your employer has arranged for this option. Avoid public spaces (i.e. places of worship, grocery stores, malls, restaurants, schools) and public transportation, taxis or rideshares. Cancel all non-essential appointments.

### DO NOT come into close contact with others

If there are other people in your home (who are not self-isolating), consider whether they can stay somewhere else. If you live with other people (who are not required to self-isolate), consider whether they can stay somewhere else temporarily. If this is not possible, isolate in a separate room away from them. Use a separate bathroom (if this is not possible, make sure the shared bathroom is cleaned and disinfected regularly, and always flush the toilet with the lid down). Have meals dropped off at your door. Ensure good airflow (e.g. open windows or doors to allow air to circulate) in any common areas.

# COVID-19 SELF-ISOLATION GUIDELINES

## **DO NOT have visitors**

Food, medication and/or other supplies can be dropped off outside the home (or your door) by friends, family or delivery people. Stay in touch with others through technology.

## **DO NOT have any contact with vulnerable people**

Be especially careful not to avoid contact with seniors, those with weak immune systems and those with chronic health condition (i.e. diabetes, lung problems, heart disease). If you need to be in the same space, make sure to keep 2 meters (6 feet) of space between you and them.

## **DO stay in touch virtually**

Maintain social connections by reaching out to family and friends through phone or video chats.

## **DO get fresh air and exercise**

You are allowed to go outdoors to get fresh air or to exercise. Ideally do this in a private space such as a yard, low-populated areas, or a balcony. Make sure to keep a distance of 2 meters (6 feet) from others at all times.

## **Deal #2: Monitor Yourself for Symptoms**

## **DO check to see if you develop symptoms**

Monitor yourself for any of the symptoms of COVID-19: fever, chills, cough, shortness of breath, sore throat, runny nose, loss of smell/taste, fatigue, diarrhea, loss of appetite, nausea, vomiting, muscle aches etc.

# COVID-19 SELF-ISOLATION GUIDELINES

## **DO seek medical attention if you develop symptoms**

Dial 8-1-1 to speak to a nurse (available 24/7) to report that you have developed symptoms after travel. If you have trouble breathing, dial 9-1-1 and tell any first responders that you may have COVID-19.

## **Deal #3: Continue to protect yourself and others in your home**

### **DO wash your hands often**

Use soap and water to wash your hands for 20 seconds. If this is not an option, sanitize hands with an alcohol-based hand sanitizer that contains at least **60% alcohol**, has a Natural Product Number (NPN) or Drug Identification Number (DIN), and/or is otherwise approved by Health Canada.

### **DO keep physical distance**

Stay at least 2 metres (6 feet) away from others.

### **DO wear a mask**

Use a mask if you ever need to be within 2 meters (6 feet) of others.

### **DO cover coughs and sneezes**

Use a tissue or your elbow (or upper sleeve) to cover coughs and sneezes; do not use your hands. Immediately throw any used tissue into a lined trashcan, and wash your hands thoroughly.

### **DO seek medical attention if needed**

If you need non-urgent medical attention for another reason, call ahead to let the facility know that you are self-isolating after travel. Wear a medical/surgical mask if this requires you to leave home.

# COVID-19 SELF-ISOLATION GUIDELINES

## **DO NOT cook for others in the household**

While you are self-isolating, do not prepare food for others as you could risk spreading the virus (if you carry it and do not yet show symptoms).

## **DO NOT have multiple caregivers for those who are sick in the home**

While you are self-isolating, do not prepare food for others as you could risk spreading the virus (if you carry it and do not yet show symptoms). In order to prevent unnecessary exposure, have 1 person provide care for anyone who is sick in the household. Ideally, the caregiver should not be someone who is pregnant or who has a pre-existing condition that makes them high risk (i.e. diabetes, heart disease, lung disease).

## **Deal #4: Clean and disinfect often**

### **DO clean and disinfect surfaces**

Clean hard surfaces to remove dirt or grime, and then follow with a step to disinfect. High-touch surfaces (i.e. door knobs, switches, remotes) should be disinfected twice a day. Use disinfectant or a freshly prepared bleach solution (i.e. 20 ml bleach per 1L of water). Leave surfaces wet for 1 minute.

### **DO disinfect hand-held electronic devices**

Unless otherwise indicated by the manufacturer, disinfect high touch-electronics with 70% alcohol.

# COVID-19 SELF-ISOLATION GUIDELINES

## **DO wash clothing/bedding regularly**

Wash any possibly contaminated clothing, towels and bedding with regular laundry in hot water and laundry detergent. Dry well.

## **DO NOT share personal items**

Avoid sharing items such as towels, unwashed utensils and cups, thermometers, cigarettes, or electronic devices that could potentially spread the virus.

**You can end self-isolation if 14 days have passed since exposure, and you have not developed symptoms of COVID-19.**
